PROGRAMMER ANALYST

I am a Programmer Analyst with expertise in software development for web and desktop applications. I specialize in designing and implementing efficient solutions using technologies such as Java, C#, TypeScript, Angular, and Spring Boot. My focus is on creating functional and adaptable software, collaborating in all stages of the development lifecycle, from analysis to implementation. I have strong skills in logical thinking, application design, and effective teamwork in multidisciplinary teams.

Experience

UNJU FI

Programmer Analyst Student

July 2022

- Web system for the comprehensive management of business meetings. I used technologies in the development and implementation such as HTML, CSS, Bootstrap, Angular, TypeScript, Express, NodeJS and MongoDB.

UNJU FI

Programmer Analyst Student

August 2023

- Management system for a parking lot. The system allows the registration of vehicle entry and exit, ticket generation, customer management, vehicle types and users. I used technologies in development and implementation such as C#, WPF, .NET Framework and SQL Server.

APPLICATION MANAGEMENT SYSTEM

Developer

February 2024

- Web system for self-management of applications for job offers in a company. As a junior developer, I dedicated myself to finding solutions to code bugs in limited periods of time. I used technologies in development and implementation such as Java, Spring, HTML, CSS, Bootstrap, Thymeleaf, Hibernate and MySQL.

LOVELY DATING APP

Developer

March 2024

- Project LovelyApp dating app, allows users to register and create profiles detailed. I used technologies in development and implementation such as Java, Spring, HTML, CSS, Bootstrap, Angular17, Hibernate, WebSocket, Rest API, and MySQL.
